1. Applicant is requested to cancel non-elected claim 1 in response to this action to expedite prosecution of the case.

2. Claims 3-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2 and 11-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art in view of Slater essentially for reasons of record.

4. Applicant's arguments filed October 1, 2003 have been fully considered but they are not persuasive. Upon reconsideration, claims 3-7 would be allowed if put in independent form. However, the obviousness rejection has been maintained for claims 2 and dependent claims 11-17. While the admitted prior art (APA) may show molding disks simultaneously, there are only two ways of cooling the disks—either on two separate lines, as done in the APA, or using a single line, as is conventionally done with single disk molding machines as exemplified by Slater. It is respectfully submitted that cooling by either method simply would have been obvious especially since one of ordinary skill in the art would have had knowledge of both. The motivation for the combination would have been simply economic—one take-out mechanism and cooling

line would be cheaper than two such lines. Concerning the pitch, applicant's calculations (page 8 of the amendment) reveal a spacing that would be as large as 7 times the thickness of the disk. Certainly, "at least 6 times" (claim 11) is encompassed by this, as are claims 12 and 14; "at least 8 times" as required by instant claim 13 would respectfully appear to be obvious thereover. The exact interval for feeding the disks would certainly have been within the skill level of the art dependent on cycle time desired and mold cool down required.

5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
